(54) Title: WATER TREATMENT DEVICE FOR ELECTROLYZING, MAGNETIZING, AND RE-RESONATING WATER

(57) Abstract: This invention relates to a method and device for producing electrolyzed, magnetized, and re-resonated water. The water treatment device comprises an electrolytic chamber separated into an anode chamber and a cathode chamber by a semi-permeable membrane. The cathode chamber contains a vortex cathode and a magnet placed above the vortex cathode. Electrolyzed, magnetized, and re-resonated water can be produced by filling the water treatment device with an electrolytic solute and running current through the device to produce alkaline water at the cathode, which is then re-resonated and magnetized by the action of the vortex cathode and magnet.
